

All about bees

Bees live in hives. Every hive has a queen bee.

A queen bee is the biggest bee in the hive.

What do they look like?

What do they do?

Bees collect pollen to make into honey. They put pollen into their pollen baskets. They also spread pollen from plant to plant because it sticks to their fur. This helps plants to grow fruits and vegetables.

Bees tell each other where honey is by dancing. Worker bees are female, they have many jobs. Drone bees are male and will search for other queen bees.
