

There are 10 doughnuts.

There are 2 doughnuts for each person.

The box will feed 5 people.

Children complete the drawing by adding two more bags of five doughnuts:

All of these models match the calculation except the base ten blocks which represent the calculation  $20 \div 10$  and the red multiplink which do not have equal groups, one has 5 cubes and the other has 4.

$$22 \div 2 = 11$$

$$30 \div 5 = 6$$

These calculations are all possible to give an answer of 4:

$$40 \div 10$$

$$20 \div 5$$

$$8 \div 2$$

$$4 \div 1$$
