

18	
10	8

8 and 10 could be the other way around in the part circles.

$$8 + 10 = 18$$

$$10 + 8 = 18$$

$$18 - 8 = 10$$

$$18 - 10 = 8$$

$$5 + 15 = 20 \qquad 20 = 15 + 5$$

$$15 + 5 = 20 \qquad 20 = 5 + 15$$

$$20 - 5 = 15 \qquad 15 = 20 - 5$$

$$20 - 15 = 5 \qquad 5 = 20 - 15$$

Children should correctly write 8 different calculations and draw a part-whole model for their chosen number bond. Here is one example:

$$6 + 11 = 17 \qquad 17 = 11 + 6$$

$$11 + 6 = 17 \qquad 17 = 6 + 11$$

$$17 - 6 = 11 \qquad 6 = 17 - 11$$

$$17 - 11 = 6 \qquad 11 = 17 - 6$$

Children will come up with a variety of answers. Look for understanding of the correct answer and how and why it can be changed to be incorrect.
